1. Introduction

The statistical operation on Marriages provides information on marriages that affects residents in the Basque Country.

The files for the *Estatistic on Marriages* constitute a product for circulation that targets users with experience in analyzing and processing microdata. This format provides an added value to the user, permitting him or her to carry out data exploitation and analysis that, for obvious limitations, cannot be covered by current circulation in the form of tables, publications and reports.

The microdata file corresponding to Marriages is described in this report. The circulation of the Marriages file with data from the first spouse combined with information on the second spouse is carried out on the basis of the usefulness and quality of the information that is going to be included as well as the interest for the user, because it is more beneficial for the person receiving the data to be able to work with them in a combined form.

2. Criteria for selection of variables

This file contains a selection of the variables on the two spouses collected. The selection of variables has been carried out based on criteria for both sensitivity and confidentiality, which are detailed below:

2.1 Criteria of sensitivity

The content refers to data specially protected by the Protection of Personal Data Act that requires the express consent of the person before it can be transferred. In this statistic no variables with these characteristics have been found.

2.2 Criteria of confidentiality

Maintaining the statistical secrecy of the informants is one of the main premises that governs this statistical activity. Therefore, the dissemination of any individual information collected under statistical secrecy must be carried out anonymously and in such a way that it cannot be associated with any specific individual, not even via the content or disaggregation of the disseminated variables.

Therefore, and in order to guarantee this safeguard, the following restrictions have been applied to the Marriages 2008 file:

- Under no circumstances are variables of direct identification or data of a personal nature (DNI, name, surname, addresses, telephone numbers, etc.) to be included.
- The maximum geographic disaggregation included is towns with a population of more than 10,000.
- Nationality has been grouped into "Spanish" and "Foreigner".

- The age of the person of reference is presented in years.

3. Registry design

The microdata file of Marriages 2008 has a text format with fixed columns, and it is structured around the thematic areas collected by the register for this statistical unit.

4. Description of variables

They include the literals corresponding to the codification of each one of the variables included in the file. See Appendix.

APPENDIX 1.

DESCRIPTION OF THE FILE MARRIAGES 2008.DAT

1 Town of registration with more than 10.000 inhabitants
